CAD/CAM by JFY

The first shot always hits

JFY Plus ensures precision through programming with reverse engineering. Less scrap. More profit.

In challenging times, with rising costs and fewer skilled hands, every minute counts. That's why JFY now offers its own software with programming autopilot — developed in-house for faster, more precise, and more profitable production.

Save time. Work smart.

Upload hundreds of parts in one click. Let software automation handle the rest so you can focus on your shopfloor.

Get it right. First time.

A reversed workflow ensures precision from the start — no guesswork, no rework. Faster, easier, and with fewer errors.

Cut scrap. Cut cost.

More accurate and full automatic programming means less waste, fewer errors — and up to 50% savings in material and effort.

Everything connected.

From part data to final part — one seamless platform for laser and bending in perfect sync.

Who is JFY Software made for?

JFY Plus is ideal when you need more speed, more users, or full laser + bending workflow in one tool. The JFY Bend and JFY Cut Software come standard with every new machine and can be upgraded to JFY Plus at any time.

Software like you.

JFY

Speed x Precision = Profit

With JFY Plus, you save time, reduce waste, and lower your costs — all while increasing precision and output.

SPEED

Increase Uptime with automated Offline Programming. Program in the office while machines keep running. Stay productive without stopping production.

Save up to 97% in programming time.

PRECISION

Reduce errors, avoid rework, and cut material waste. With one integrated workflow and precise calculation, JFY Plus helps you produce first time right parts.

Up to 50% less scrap.

PROFIT

Multiply your margin. Speed and precision don't just boost efficiency — they unlock real profits. With more productive machine time, less scrap and programming time and low licensing costs.

Measurable ROI.

Gary knows what your shop needs.

As project lead and industry expert behind JFY Plus, Gary brings decades of hands-on CAD/CAM experience and deep industry insight. He's worked with jobs across Europe, Asia and North America — and knows exactly where time, money, and energy are lost in sheet metal job shops.

"JFY Plus is built to empower each shopfloor with intuitive and fast programming. The time is over for complex and costly CAD/CAM tools as well as trial and error programming."

Gary Carnall, Head of Application and Customer Support

Flip the Flow. Perfect the Part.

Explore the smart features that make JFY Plus "The One."

JFY Plus combines bending and laser cutting in a single intuitive software solution. Thanks to its reversed workflow — starting with bending before cutting — JFY Plus plans your process the smart way. You avoid trial and error, reduce scrap, and get it right the first time. With quick file import, smart parameter checks, and a centralized database for easy file management, it's designed for seamless teamwork — even with multiple users.
